Description

The CB 18 is a modern multi-standard transceiver capable of operating in both AM and FM modes, with a power of 4 watts, covering a frequency range between 26.565 and 27.99125 MHz. This means it can operate on all approved European frequency bands and also has direct access to channels 9 and 19 for emergencies.

The CB 18's microphone has been designed with a new capsule, offering fuller voice modulation. Furthermore, it is equipped with three buttons (UP, DOWN and LOCK) which allow you to change channels quickly and easily.

The dual squelch mode (manual and DS) with five adjustable levels helps reduce ambient noise, ensuring clearer reception.

The reception attenuator (RF gain), adjustable on seven levels, allows you to obtain clean reception, avoiding possible distortions caused by transmissions on adjacent channels.

The VOX function, which is activated when voice is detected, allows hands-free communication and is adjustable on five levels.

The multi-colour LCD display (7 colours) with S-meter makes the CB 18 aesthetically pleasing and provides clear and easily readable information.

There is also an external speaker socket, which can be used to further amplify the sound. As for power, the device comes with a cable equipped with a cigarette lighter socket, which allows for easy connection without the need to connect directly to the vehicle battery.

The compact dimensions (114x43x180 mm) and light weight (499 g) make the CB 18 easy to install.

Code: C1562

EAN Code: 8011869205989

Compliance: European EC regulation
